

Laboratoire CBTP: from carbon footprint to climat profit sharing

Laboratoire CBTP is an analysis, studies and control laboratory specialized in materials (aggregates, floors, concrete ...) counting 60 employees. Pursuing its environmental and low-carbon strategy, the company wanted to valorize the greenhouse emissions avoided since the realization of a carbon footprint. With the support of the ELEEN program and in collaboration with O2M Conseil, the laboratory entered the Compte Epargne CO2 process which allows to get CO2 savings recognized by the Kyoto protocol and to produce carbon assets. Those efforts have been validated by the UN and the DGEC (Section of the French Ministry of environment) last July; the laboratory will hand on those assets to its employees making them join the climate transition and fulfilling its CSR policy.
